

This Shoecare Range

contains many products specially made to care for leather and nubuck footwear.

These include creams, polishes, liquids and sprays designed to clean, renovate, condition and provide weather protection.

Ask your stockist for details.

**For use on leather shoes only.
Not suitable for synthetics.**

Leather shoes can be dyed to a darker shade of the original colour. The result after dyeing will depend on the original colour of the shoe.

Directions

1. Wear rubber gloves.
2. Remove old polish and dirt with soap and water or with methylated spirit.
3. Leave shoes to dry completely.
4. Apply the dye evenly. When dry add a further coat if necessary.
5. Allow shoes to dry naturally.
6. Polish with Shoe Cream to remove any bronze effect and to seal the dye.

Nubuck

Most Nubuck will accept dye. Brush shoes to remove dirt and test on a small area to ensure the dye will be absorbed. Brush when dry.
