

This Shoecare Range

contains many products specially made to care for suede footwear.

These include sprays that will provide weather protection and rejuvenate colour as well as helping to keep suede soft and supple.

Ask your stockist for details.

**For use on suede shoes only.
Not suitable for synthetics or
Nubuck.**

Suede shoes can be dyed to a darker shade of the original colour. Alternatively, the existing colour can be revived by using the same shade of dye. The original colour of the shoes will affect the final result since normal colour mixing rules will apply. Always test on a small hidden area first.

Directions

1. Wear rubber gloves.
2. Ensure shoes are dry.
3. Brush shoes thoroughly with a stiff brush to remove surface dirt.
4. Apply dye liberally and evenly with applicator.
5. Allow shoes to dry naturally.
6. When dry, brush up nap with suede brush before wearing.

Note

The contents of this bottle should dye one pair of shoes or short boots but more dye may be necessary depending on the absorbency of the suede.

Important

There are many materials termed as suede. It is impossible for manufacturers to guarantee the result of the dye on any particular type of suede. Some suede may harden as a result of dyeing:
